ROCK your Subie

ROCK - ROLL CENTRE KIT

WHITELINE ROCK KCA 313 NOW
COVERS 2008 IMPREZA WRX and
STI MODELS.

A WHITELINE ROCK is designed to raise the front roll-centre geometry by using specially engineered ball-joints and tie rod ends while still maintaining original steering geometry.

The front roll geometry actually encourages roll the lower you go. Tests on P28 showed that raising the front roll-centre resulted in a substantial increase to front roll resistance and a significant reduction in suspension compression of the outside front wheel during cornering (less roll).

This **improves weight distribution**, maintains a **better camber angle** and ultimately **improves front grip**. The overall outcome is significantly **reduced understeer** through reduced front wheel compression, as well as **improved steering feel, steering precision and vehicle stability**.

PART NUMBER: KCA 313

suits all model Impreza WRX and STi
(sedan and hatch) models

Kit is supplied with 2x complete sets of specially modified ball-joints, steering tie rod ends, grease cups, mounting hardware, comprehensive fitting instructions.

**NEW AND IMPROVED
HEAVY DUTY SILICON DUST BOOT**
"Super high temperature resistant silicon for serious racing and high brake temperatures.
Tested at 650C rotor temps"

P-28
